

## FAQ's - PRETOX INFIN8

### 1. What is Pretox® Infin8®

Infin8 is THE second generation Injection-Free alternative to Botulinum Toxin that is proven to be 30% stronger than ANY other corresponding Argireline product and is EXCLUSIVE to Medik8®. Pretox Infin8® contains 20% octapeptide – the elongated form of Argireline® – the current front-runner before Infin8®. Expect to see a reduction in wrinkle depth of up to 50% in as little as 30 days although of course individual results vary and some users respond more slowly – 6-8 weeks is common.

### 2. Does Infin8® incorporate dermal filling properties?

No. Infin8 is a very strong Botox® alternative and is the upgrade to Argireline products. However to get the benefits of dermal filling – recommend either Prefill® which is the Medik8 dermal filler to be used together with Infin8® or Pretox 3-HTP® which not only contains 23% of the wonder peptide Argireline®, but also contains a pentapeptide and a tetrapeptide which repair the damage from free radicals and encourages collagen and elastin production in the deeper layers of skin.

### 3. How does it work?

Pretox® reduces the depth of the wrinkles in the face caused by the contraction of the muscles of facial expression, especially in the forehead & crows feet at the side of the eyes. In contrast to botulinum toxin, its mechanism does not cause paralysis and it allows natural expression and movement, while relaxing the repeating contraction of the muscle causing the wrinkle.

### 4. How long does it take to see the results?

Pretox Infin8 can take anything between 6-12 weeks to start showing results depending on the client's age, and the severity of the lines and wrinkles. Peptides do not work instantaneously although mild tightening will be felt in a few minutes, the full effect takes upto 3 months - so patients may not notice dramatic changes to begin with – this is why the bottle is 50ml and not 30ml like some others.

### 5. How long do the results last for?

Just like Botox, the effect of peptides will wear off over time and so reapplication is required to maintain results however after the initial twice daily application over the loading phase has achieved the desired results – the reduction to a once daily application 5 times per week will maintain the changes will not be maintained if the patient ceases to use the products, so they must be reminded of this. Our skin continues to change according to its health and ageing risk factors so, to maintain the change, the product must be used continually.

6. Where do I apply the product?

Apply a small amount on the forehead, between the eyebrows (glabella) and at the side of the eyes (crow's feet). Do not apply under or on top of the eyelid.

7. Can I use it with my existing skin care products?

Yes Pretox Infin8 will work alongside any other skincare brand just apply it immediately after cleansing; allow it to dry and then follow with your normal skin products on top.

8. Are there any side affects?

None have ever been reported
