

Eye Anti-Wrinkle Dark Circle Concentrate

FAQ's:

What percentage of peptides does Eye contain?

Eye contains a total of 32% peptides, a total of seven, five of which are collagen-boosting peptides, one which increases circulation and reduces puffiness and one which is wrinkle relaxing.

Are there any possible allergies?

Eye contains crushed pearls and glucosamine. Both are derived from shellfish. Those with shellfish allergies should avoid Eye.

I woke up this morning with puffy eyes. Isn't Eye supposed to reduce puffiness?

Eye is an effective under-eye de-puffer. After 30 days, 65% of volunteers saw a reduction in bag volume and after 56 days 70% saw a reduction. Eye is very concentrated and hydrating. Since one of the main hydrators with Eye is Hyaluronic Acid (Sodium Hyaluronate) which is also a humectant that pulls hydration into the skin, if too much product is applied it can pull too much hydration to the surface. Only pump half a pea-size amount of Eye and divide it between both eyes. Apply any excess to upper lip area.

Can a man use eye?

Even though Eye contains crushed pearls that act cosmetically to refract light and brighten the eye area, it is not a glistening or makeup looking effect. It will add brightness to the eyes and be something that will discourage men from applying it.
