

## Face ☹️⚡💧🛡️ Anti-Wrinkle Repair & Prevent Treatment

### FAQ's:

Will Face brighten age spots?

Yes. Face contains Kombuchka (Saccharomyces/Xylinum/Black Tea Ferment) that increases radiance. It also includes tyrosinase inhibitors that naturally brighten skin, including Licorice, Magnesium Ascorbyl Phosphate (Vitamin C) and Bearberry.

Why doesn't Face contain physical sun protection (SPF)?

Face is a treatment designed to penetrate the skin to increase signals such as increasing collagen. SPF is designed to be a physical blocker of UV rays that stays on the surface of the skin. Peptides cannot penetrate the skin to where they'll be effective if they're combined with SPF.

After applying Face, my skin still feels like it needs more moisture?

Face is first an anti-aging treatment and second a moisturizer. For some, the hydration is not enough. For those with more mature and dehydrated skin, Power Lift may be a better option for both day and night use. For those that want lighter hydration during the day but more during the night, Face works great as a day time treatment and Power Lift as a night time regimen.
