

## Face $\Theta$ $\Upsilon$ $\blacktriangleright$ $\blacklozenge$ $\heartsuit$ Anti-Wrinkle Repair & Prevent Treatment

### FAQ's:

What percentage of peptides does Face contain?

Face contains a total of 30% peptides, a total five, four of which are collagen-boosting peptides and one which is wrinkle relaxing.

Why is a combination of 16 antioxidants important?

There are four types of free radicals (or ROS): superoxide, trichloromethyl, nitric oxide, and mercapto radicals. These free radicals have an unpaired electron that are highly unstable and are responsible for wrinkles, sagging, dryness, age spots, inflammation and skin cancer. Antioxidants terminate or block the free radical chain reaction. Combinations of antioxidants have synergistic effect and better efficacy in blocking all for types of free radicals, in addition to also providing anti-inflammatory, skin lightening and anti-wrinkle benefits.

What is the main hydrator in Face?

We consider Face a smart moisturizer . It's main hydrating ingredient is Hyaluronic Acid which can hold 1000 times its weight in water. It pulls hydration from the air and deep within the skin to the surface layers and gives the skin exactly what it needs in hydration. It also contains shea butter and ceramides for light hydration.

Should I layer Face over Serum?

Serum and Face compliment each other very well. There is only one overlapping peptide. If used together, 10 different peptides will be delivered into the skin for superior anti-aging results.
