

Mask ✦ ⊖ ♀ ⚡ 💧 🛡️

Instant Peptide Miracle Mask

FAQ's

Will Mask dry out skin?

No. Mask incorporates Hyaluronic Acid (Sodium Hyaluronate) to increase hydration within the skin.

Will Mask help with acne?

Yes. Mask contains two types of oil-controlling clay, Bentonite and Kaolin, that extract skin impurities and Enzymes that help to shed dead skin cells that clog pores and cause acne.

Can I massage Mask into my skin without rinsing?

No. Mask is designed to be removed from the skin. Mask contains Bentonite and Kaolin clay which could potentially clog the pores if not removed.

How do Enzymes compare to Alpha Hydroxy Acids (AHA's)?

AHA's dissolve the glue around the cells, hastening the shedding of several layers of the epidermis. This can sometimes irritate the skin. Enzymes digest the dead skin cells and release newer skin gently. They exfoliate without irritation.

What are Protease Enzymes?

Protease Enzymes are also known as Proteolytic enzymes and are found in pumpkin. These enzymes mimic the role of your own body's natural protease enzymes and promote decay of the protein and dissolution of dead skin cells stimulating cell renewal. The combination of Protease and Subtilisin increased cell turnover by 25%.
