Marini Lash Eyelash Conditioner has been shown to be effective in providing moderate to dramatic cosmetic eyelash enhancement in Jan Marini case studies. Self assessment measurements were consistently high. Marini Lash also has an excellent safety profile; possible transient irritation was minimal to none.

## MARINI LASH™

In 2005, Jan Marini Skin Research pioneered and introduced to the aesthetic world a technology designed to enhance the appearance of eyelashes. Since then, the market for eyelash enhancement has been populated with an increasing spectrum of solutions available to the consumer.

As this market developed, it was critical for me and our company to introduce a next generation product solution within this enhancement category. One which would be uniquely designed and well-positioned as both an exceptional technology, and a significant value as compared to the alternative solutions available.

***Marini Lash is that product!***

**Marini Lash is a novel product that features:**

- ✓ A proprietary peptide blend, which, when combined with other stimulating factors produces the appearance of extraordinary eyelash and brow enhancement.
- ✓ A uniquely designed, non-prostaglandin analog formulation which has an exceptionally high safety profile with virtually no transient irritation.\*

Since the introduction of Marini Lash in 2008, we continue to hear how satisfied consumers are with this product. I welcome you to the growing population of worldwide Marini Lash users. Like them, I'm confident that in a period of just a few weeks, you will see the results which will be noticeable by you, your friends and your family.

***Long live extraordinarily beautiful lashes!***

\*Independent safety testing was conducted by a Dermatologist and an Ophthalmologist. No sensitization was noted upon repeat insult patch testing and slit lamp testing.

# ENHANCE YOUR LASHES WITH CONFIDENCE

**Question:**

What is the recommended way to apply Marini Lash?

**Answer:**

Apply sparingly once per day in the evening. Only a small amount of product is necessary for each application. Apply with applicator brush in a thin line, along upper lashes at the root area (as though you are applying eyeliner). You will not need to apply Marini Lash to the lower eyelid as the product will naturally migrate to the lower eyelashes.

**Question:**

How often and when should I use Marini Lash?

**Answer:**

Marini Lash is recommended to be applied only once a day by users, preferably in the PM.

**Question:**

When can I expect to see eyelash enhancement results associated from the use of Marini Lash?

**Answer:**

Result timelines do vary individually from as little as 3 weeks to possibly as long as 12 weeks for some patients. Typically, users report initial enhanced results within 4 to 6 weeks from beginning Marini Lash application.

**Question:**

If I miss a day in applying Marini Lash, will this compromise the results I will obtain?

**Answer:**

Missing a day of usage with Marini Lash will likely only slightly delay the benefit of the enhanced appearance for the user. It is encouraged that if the user forgets to apply at night, to use Marini Lash the following morning and then resume back to the nightly occurrence.

**Question:**

Can I use Marini Lash if I also wear contact lenses?

**Answer:**

Marini Lash has shown to be safe and effective for contact lens wearers.

**Question:**

When I achieve the eyelash enhancement appearance that I am completely satisfied with, can I possibly stop usage of Marini Lash?

**Answer:**

In order to retain the results, you should remain on the protocols for Marini Lash even after achieving lashes you are fully excited to see develop. By discontinuing use of Marini Lash, you can expect in a matter of several weeks that your eyelashes will revert back to their appearance prior to use.

**Question:**

How long will a container of Marini Lash last?

**Answer:**

For the typical user, Marini Lash should last approximately 6 months per container.

**Question:**

Has Marini Lash been safety tested?

**Answer:**

Yes. Both in safety studies conducted by Ophthalmologists and Dermatologists as well as an independent study conducted for well over a year by Jan Marini Skin Research. Marini Lash has demonstrated to be safe with no reported issues beyond transient and mild irritation by a small subset of patients.

**Question:**

What should I do if I accidentally get Marini Lash in my eye?

**Answer:**

If you inadvertently get direct eye exposure of Marini Lash, immediately flush the eye repeatedly with water. If irritation persists in the eye after an hour, consult a physician immediately.

**Question:**

Does Marini Lash also work on the eyebrow?

**Answer:**

Yes, many users of Marini Lash have included using the product for the appearance of eyebrow enhancement. As with applying with eyelash, it should be used once a day with the product volume dispensed being absorbed by eyebrow without residual liquid remaining in the brow.

# TESTIMONIALS

"Our practice carries both Latisse™ and Marini Lash and find they complement each other quite well. Marini Lash has been an excellent choice for our patients who are concerned with potential irritation or side-effects sometimes associated with Latisse. In addition, we have found that the value proposition for Marini Lash is a great alternative for our practice to offer within the eyelash enhancement segment. Having both proven solutions provides our practice with the most comprehensive and best brands associated with the growing eyelash category."

**Alexander Doan, MD**

NuSilk Medical Spa  
San Jose, CA

"Jan Marini Skin Research pioneered the development of eyelash conditioners. Since reformulating its product into the newly released Marini Lash, we have been seeing significant results in our trial patients. This non-prostaglandin product will lead the way in the new generation of eyelash conditioners. Patient satisfaction clearly shows us that eyelash enhancement is an important aspect of aesthetic improvement."

**Ian Carlisle, MBBS, BDSC, FRACS**

Plastic Surgeon  
Australia

"I just wanted to mention how much Marini Lash has made a difference in my lashes. For instance, the other day someone thought I was wearing mascara when I wasn't and that was only after about 4 weeks of using Marini Lash! I am so excited to be able to provide a product that is safe and effective for my customers."

**Dawn Heyl, Medical Esthetician**

J. Nokleberg, MD  
Dallas, TX

"I love the Marini Lash! My lashes have never looked this good. I started noticing a difference within three weeks and now, just six weeks later, I am more and more amazed at how awesome my eyelashes look. Thank you Jan!"
