

DermaTx™

ADVANCED SKINCARE

CLARIFY

Professional grade corundum crystals - the most widely used and most abrasive material for microdermabrasion procedures.

Salicylic acid 2% - used to treat skin that is prone to acne, blocked pores or breakouts as it sloughs away the dead surface skin, preventing the pores from clogging up which would otherwise lead to congested skin. Salicylic Acid is an active ingredient in treatment products for spots and breakouts. This spot-fighting ingredient accumulates in the skin and hair follicles, even after rinsing, to clear breakouts and to help prevent future ones.

Vitamin A - proven to treat acne by unblocking hair follicle pores and regulating sebaceous gland activity for anti-acne and comedolytic benefits.

Vitamin C - An antioxidant that helps to promote skin rejuvenation by reversing free radical damage caused by the sun and natural ageing. It also aids in stimulating collagen production within the skin and helps lighten discolouration.

Vitamin E is one of the most powerful antioxidants. It helps to protect and repair your skin and can also help improve skin hydration.

Cutipure CLR™ - to control bacteria, excess oil and inflammation. Cutipure CLR™ has shown to significantly reduce the number of pimples, pustules and comedones on people with oily skin. It has also shown to have a potent regulating effect on elevated sebum production.

Pentavitin® - A highly effective moisture regulator under the driest of conditions. Where most moisturising agents would lose their effectiveness, Pentavitin® continues to be active and effective helping with dryness and irritation.

Avenacare™ (Oat Beta Glucan) - moisturises dry skin and offers specific benefits in improving the skin's appearance. It helps to soothe skin and reduce the appearance of skin redness as well as fine lines and wrinkles.

Antileukine 6® is an innovative immunological filter. It helps reduce redness, itching, irritation and inflammation while providing a unique DNA protection against the sun and stress reactions.
