

## COSMETIC PREPARATION FOR EXTERNAL USE

New Fillerina®, which Labo has been working on since 2007 (the year the trademark was registered), is the first generation of filling and plumping treatments: it works in such a way as to be presented as a cosmetic filling treatment for at-home use.

The product takes its name from the **filling mechanism** of face depressions (wrinkles) thanks to the action of the main active ingredient: special **hyaluronic acids** in **different forms** for a different level of filling of expression lines, age wrinkles, microrelief and areas of the face subject to sagging (cheekbones, around the oval of the face, surface of the lips).

Similarly to the hyaluronic acid filling treatments used in cosmetic medicine, the aim of Fillerina® is to allow large quantities of hyaluronic acid to penetrate deep into the cutaneous tissues (ex-vivo tests). The hyaluronic acid, binding water, fills in the most visible, deepest and most widespread depressions (respectively, sagging, wrinkles and (microrelief) and boosts the volume of cheekbones and lips.

## ACTIVE INGREDIENTS

As skin ages, the amount of hyaluronic acid gradually declines, causing imperfections such as aging wrinkles, expression lines and a loss of volume (deflation and skin depressions), especially as regards the cheekbones, cheeks and lips.

Fillerina® features – for the first time – a mix of six different hyaluronic acid molecules of varying molecular weights and sizes deeply conveyed by a special carrier that are especially effective at penetrating the layers of the skin (ex-vivo tests) and thus allowing tissues to be filled in and plumped up.

The hyaluronic acid effect is completed by other active ingredients: Matrifull, a peptide conveyed by cyclodextrin, promotes tissue tropism of the skin and the natural processing of the filling substances, for a gradual and progressive plumping up.

A hexapeptide regulates the movement of water through the skin, helping to keep the skin hydrated.

### Contains:

**14 doses of 2 ml of Gel Filler**

**14 doses of 2 ml of Nourishing Film**

**2 precision applicators**

Authorized Fillerina distributor for UK: Medical Aesthetic Group.

LABO  
LABO COSPROPHAR

## DOSAGES

Fillerina® dermo-cosmetic filler Treatments for at-home use come in three different concentrations, in order to provide the most effective, suitable treatment for the conditions of the skin and the cutaneous tissues of the face and neck.

**Grade 1:** moderate age wrinkles and expression lines, evident microrelief and facial features with signs of sagging, especially cheekbones and lips.

**Grade 2:** visible age wrinkles and expression lines, marked, uneven microrelief, areas with visible sagging, especially cheekbones and lips.

**Grade 3:** deep age wrinkles and expression lines, very marked, uneven microrelief and severe sagging of facial features, especially cheekbones and lips.

## TREATMENTS

Fillerina® dermo-cosmetic filler treatments for at-home use are composed of the gel filler (Fillerina® 1), with a high content of immediately absorbed hyaluronic acids, and the Nourishing Film (Fillerina® 2), to be used after the Gel.

**Graduated cosmetic precision** applicator with truncated tip.  
SWISS PATENT CH 695 412 A5. For external use only. Do not inject.

## INSTRUCTIONS FOR OPENING AND USE

The **Fillerina® filler treatment** must be used every day for 14 days, in the morning or evening, depending on individual needs and habits, applying 2 ml of Gel Filler (**Fillerina® 1**) to the wrinkles, the most marked microrelief and the areas that require particular plumping up (cheekbones, lips).

Lift the tab of the seal found on the bottle. Firmly pull down the seal. Remove the rubber cap. The application has to be done inserting the particular **Applicator** into the bottle.

This applicator allows to draw up two separate 1 ml amounts of product (adding up to a total of 2 ml per application) and release it accurately into the desired areas.

**After opening we suggest to close the bottle using the cap you find inside the box.** The gel filler should be left to work for 10 minutes in order to allow the active ingredients to “fill in” the application areas.

**To facilitate the action of the product, it is advisable to drink two glasses of water before the application of Fillerina Gel.**

## FILLERINA® DAILY TREATMENTS

Fillerina® Daily Treatments, containing a lower concentration of hyaluronic acids, are also available in three dosages, corresponding to different types of problem. This applies to the Day Cream and Night Cream, as well as the Eye and Lip Cream.

**Fillerina® Day Cream** 50 ml tube: for use alone or together with other Fillerina® products.

**Fillerina® Night Cream** 50 ml tube: for use alone or together with other Fillerina® products.

**Fillerina® Eye and Lip Cream** 15 ml tube: for use alone or together with other Fillerina® products.
