## Anti-Wrinkle Polish & Plump Peel (2 Step)

### FAQ's:

Should I vigorously scrub Peel Step 1?

No. Many people tend to believe that scrubbing will yield more results. This is not true. Step 1 should only be gently massaged on the skin with small circular motions. Scrubbing vigorously will cause inflammation and irritation.

Can Peel be used on all skin types?

It is recommended that those with more sensitive skin reduce the manual exfoliation of the Peel. This is done by not massaging the more sensitive areas (usually area right by nose) when applying Step 1. When applying Step 2, only swipe Step 2 over Step 1 and let set without any additional massage. Rinse and applying appropriate treating product.

Do you apply Peel on dry or wet skin?

Either way of application is appropriate. True microdermabrasion is performed on dry skin. Massaging Step 1 onto dry skin can yield more results but possibly irritation. We recommend cleansing skin, then applying Tone and Peel immediately after. Skin will be slightly damp and prepped for Peel.

If I apply this daily, will I see more results?

Regular and consistent use of Peel is recommended for best results but not daily. Peel should be used once to twice weekly. If used more frequently, inflammation and irritation can occur.
