

Recommendations for your peel

The purpose of a **SKIN TECH** peel is to remedy skin ageing, photo damaging problem, pigmentation marks, acne scars, to decrease acneic tendency, etc. The skin's texture is refined and the complexion becomes clearer and brighter.

According to your skin and the results you are looking for, your doctor will help you choose the right peeling and post treatment daily care products you need. There are three different types of peel -light, medium or deep- depending on the depth to which the skin is treated.

All peels should be carried by an experienced doctor.

Usually, there is no need to prepare the skin beforehand, except the necessary cases.

We recommend you remove your jewelry (necklace, earrings, etc.) before the application of peeling. While the peel is being applied, you will feel a sensation of warmth on your treated area that is perfectly bearable. The first 2 days after the peel, your face feels a little tight. The 3rd and 4th day, your skin can flake more noticeably.

Only Touch followed by **Easy TCA** is efficient and safe treatment for age and sun spots and benign, localized keratoses on the face and body (< 1cm diameter).

Two weeks before treatment, you should start applying **Skin Tech Blending Bleaching Cream** on the area to be treated.

- The post-peel cream applied by your practitioner must be kept on until the next day. Please, do not wash the treated area in the evening of the peel.
- The next day, please cleanse your face with special **Skin Tech Cleanser**.
- To optimize peeling results Skin Tech has prepared complementary daily care products: **Skin Tech DHEA-Phyto Cream** optimizes the result of anti-aging treatment, apply it twice a day. **Skin Tech Nutritive Cream** can be used for a complementary anti-aging treatment, great for smokers. **Skin Tech Blending Bleaching Cream** helps even out the complexion on your skin.
- A few days after the peel, scabs will form on the area treated by **Only Touch**. This is perfectly normal and you should not worry. The scabs will heal within +/- 10 days. You must not pick at them or scratch them and you should keep the treated area well hydrated.
- Please, after peeling, protect your skin from the UVA/UVB with **Melablock-HSP® SPF 30** or **Melablock-HSP® SPF 50+**.
